CLAIMS

We claim:

5

- A composition for chemical mechanical planarization comprising an aqueous solution of ozone and abrasive particles.
- A composition as in claim 1 wherein said abrasive particles are selected from the
 group consisting of alumina, silica, ceria, spinel, zirconia and mixtures thereof.
 - A composition as in claim 1 further comprising at least one additive selected from the group consisting of carbonate, bicarbonate, oxalic acid, formic acid, acetic acid, glycol acids and mixtures thereof.

15

- 4. A composition as in claim 1 wherein the concentration of ozone in said aqueous solution is less that at which ozone interactions occur.
- A composition as in claim 4 wherein said concentration of ozone is less than about 20
 parts per million.
 - 6. A composition as in claim 1 further comprising at least one ammonium salt.
- A composition as in claim 6 wherein said at least one ammonium salt is ammonium
 carbonate.
 - 8. A method of planarizing a surface by directing ozone gas onto said surface .
- A method of planarizing a surface by directing onto said surface an aqueous solution
 containing ozone and causing relative motion of said surface and a polishing pad in contact therewith.

M-9727 US 691386 v3

- 10. A method as in claim 9 further comprising abrasive particles in said aqueous solution.
- 11. A method as in claim 10 wherein said abrasive particles are selected from the group consisting of alumina, silica, ceria, spinel, zirconia and mixtures thereof.
 - 12. A method as in claim 10 further comprising at least one ammonium salt.
- A method as in claim 12 wherein said at least one ammonium salt is ammonium
 carbonate.
